Question 16 (4 marks)

‘Modern methods of disease control place more emphasis on prevention than on treatment.’ 4

Discuss this statement using at least ONE example in your answer.

Prevention is emphasised more than treatment. This is because prevention occurs before treatment. Preventing disease from entering the body is more secure. Why let the disease enter then treating it, when you ~~can~~ can prevent it. An example of this include Malaria. Although antibiotics are available. Living with clean hygiene and avoiding unhygienic places is a much better solution.
