

3.

a) Time constraints - the system must be developed in time for the new school year.

Late development will miss initial profits. The staff must also have the time required to run the system.

Financial constraints - the new system must be affordable. School students don't have a lot of money. The new system must only use software, staff, website hosts and an Internet Service Provider (ISP) that can be afforded. A suitably priced URL is necessary too.

Technology restraints - the information system can only do what the available technology can do. Suitable hardware and software must be used.

b) There are many issues facing the proposed business.

- Copyright - no ~~copyrighted~~ ^{copyrighted} material may be reproduced without express permission. Permission is needed for all the electronic books, teacher notes and student assignments, unless they are all original works.
- Privacy - teacher notes and student assignments ~~were~~ were not made for the students to put on display. Teachers and students may not want their work public.
- Reliability - inaccurate and unreliable data will hinder a student using the business. The owners have a social responsibility to only provide accurate and reliable data.
- Fees - all charges to users of the site must be accurate and appropriate. Hidden charges or penalties must be made clear to the public as well as any changes to the fee structure / price.
- Security - as fees will be collected online, customers must be ensured of safety, and all credit card numbers and client payments and details must be kept secure and not sold to any outside business or individual.
