

a.i. A Liquid Crystal Display (LCD) screen has a layer of liquid crystal plasma between two polarising sheets, whereas a Cathode Ray Tube monitor uses three beams of light directed at a layer of phosphor to create an image. LCD uses electrical pulses.

ii Cell based animation consists of each individual cell in the animation being differently drawn, whereas path based animation has the moving parts of the animation played over a fixed background.

b.i

ii

16 × 600 × 400 — ~~size~~ image size in pixels, that is how large on screen it is

~~16~~  
~~16~~

how many colours to a pixel

c. Collecting would involve the newspaper accepting the submissions of advertisements from fax, email and post.

Organising would involve the advertisements being sorted into the categories to prepare them for being uploaded to the website. ~~It would also involve working out how much the fee for each advertisement would be by counting the number of~~

Displaying would involve ~~uploading~~ placing the advertisements into the website so that potential customers can see the ads. They would be displayed to the user by a web browser on a screen.
