

Start here.

Work and Leisure.

(c) Technology becomes more and more advanced every year. It is a big part of everyone's ~~lives~~ lives but it's getting to the point where it is taking over.

For Work you can put into three categories to explain what is most likely to happen in the future.

Present:

* It is not bad now and mobiles are more advanced than they have ever been.

* New consoles continue to come out every 4 or 5 months along with games
* and TV just became HD (high Definition).

Possible:

* Technology will take over the workforce and put a lot of people out of work

* Technology will just assist and make work so much easier.

Probable:

* Technology is going to take over the

workforce in the future.

Putting in the way I did shows us what's possible and then what is most likely to happen. I think it will take about 5 years for technology to completely take over in the future.

For leisure in the future I think that people will just sit at home because they will have all they need to keep them entertained although it's bad for them no one will stop it because sports aren't becoming more advanced technology is.

That means ~~un~~we are more likely to see very unfit children and a lot with ~~sight~~ sight problems.

Technology will take over ~~the~~ work and leisure in the future because it already is now.
