

Start here.

many of societies values, traditions, customs and beliefs can be changed and impacted by technology. Work and leisure of the past 40 years has been impacted dramatically. All change and new available technology has caused a loss of job for some and an increase amount of opening jobs for individuals, particularly in the Information Technology industry.

Leisure is another industry that will be impacted on by technology in the future. As technology continues to advance in most modern societies and does all of the virtual games and interactive games. In the ~~virtue~~ future ^{much} ~~many~~ of our education and basic life skills will be taught through the use of computer games or internet videos. Much of today's society uses the website "Youtube" as a leisure and education site to become knowledgeable of a certain activity or program being used world wide. I believe that in the future much of individuals leisure will be spent on social networking sites (such as:- facebook, myspace, Twitter or ~~skype~~ Skype) or on some sort of virtual game console. Majority of today's youth in society draw on

many ideas from being involved in simulation games or social networking sites.

Work will be affected and impacted by many business ~~and~~ owners or companies being able to be contacted at all times. This may lead to many ~~of~~ workers to no leisure time and their life may ~~be~~ revolve around work. Although this ~~world~~ career world is extremely competitive and in the future will grow.

If many business's do not keep up ~~to~~ to date ~~with~~ with quick, efficient and reliable technology they may end up with no work and no business. Many customers also rely on being able to access companies without problems. If customers have trouble accessing a particular service they will call on others' services that can do that particular job.

The future of work and leisure generally relies on technology. If there was to be issues with technology many work and leisure organisations would struggle to continue working.
