

a) i)

ii) Input	Processing	Output
Stock No.	What stock No. is related to in the file	Item Description <del>Item</del> quantity unit price
Item Description	Relates Item Description with items in store	Handle bars, quantity pedals, unit price wheels
Unit Price	Costs of products	what the buyer can buy & how many they have

b)

End User Documentation & Internal Documentation are used in different stages of the development.

End User Documentation is a manual of how to work the program and help files which are used at the last stage of the program. ~~For~~

Internal Documentation is used to tell programmers how <sup>the program</sup> works and what certain pieces of code do. It is an important part of the documentation if there is any maintenance or upgrading done to the ~~program~~ program.
