

i)

One problem with the BWF is it does not have all the keys which will be used for eg: return key alt, Ctrl, F1... F12. and other major keys. This keys will be used for ~~short~~ shortcut eg: press ~~alt~~ ctrl and P to print.

ii) hexadecimal ~~man~~ number is where there are more than one number for eg: 57, 100, 11013, that's the hexadecimal ~~man~~ number.

⑤ The possible effect of emerging network communications technology on the everyday usage of this systems are mobile phones because in the mobile phones you will find letters, numbers, special characters, underline, digits, lower case and upper case.

And also the ~~#~~ network cable and fax modem could effect this system. Fax modem could effect this system by Virus could enter into your system/ computer and crash everything.

i) The way in which analyst could involve each different type of user in the process of understanding and defining the problem is by telling them what to do when such problem occurs in the system.

ii) The different approaches are structured approach. Structured approach is good for this because it takes you step by step and it is easier to use than other approaches. Structure approach is broken down into smaller

steps and it takes you step by step.
