

25) a) i) A B C Not A AND B A OR B S

0 0 0 1 0 0

0 1 0 1 1 1

1 0 0 1 1 1

1 1 1 0 1 0

Two half adders can be linked like above to form a full adder.

b) Integer representation can only use whole numbers whether negative or positive. An example of this would be storing the number of days in a month. Floating point representation deals with decimal points and is better for more precise calculations, such as storing the temperature for each day or for scientific calculations etc.

$$c) i) X: 0101100101 = \text{right } 50\text{mm}$$

$$Y: 0110100111 = \text{up } 83\text{mm}$$

The car moves diagonally up to the right, going
83 mm up and 50 mm right.

$$ii) 101100101$$

$$11010011^+$$

$$\begin{array}{r} \cancel{1000} \\ 10000101 \end{array}$$

$$1001$$

$$1101 \overline{) 1000101}$$

$$1101$$

$$\underline{010001}$$

$$1101$$

$$\underline{0100}$$

\therefore remainder will be 0100
