

15 A fishing cooperative has hired a systems analyst to design a new system that will record the catch of each fishing vessel and the sale of the catch. Many of the members of the cooperative have their own computers and wish to contribute to the design.

What should the systems analyst do?

- ✓ (A) Invite all members to be part of a committee to define the goals and requirements of the new system.
- (B) Involve the members in the development of the user and technical documentation for the new system.
- (C) Provide the interested members with minor issues to keep them involved.
- (D) Limit the input of the interested members, as they have insufficient knowledge to contribute to the technical development of the system.

Question 15 : % answers correct by band range
