Section III Question 23

B)

Trade wastewater is dealt with in the Auto make
Work shop because some ~~water~~ work shops
wash cars and bays and need to hose
out work shops as well as washing hands
and parts, most work shops would have a
~~water~~ water separator which separates the
water from the chemicals which then goes
into the sewer system for further treatment
before being released back into water ways.

Noise Noise pollution in work shops is
very common ~~noise~~ ~~pollution~~ ~~is~~ ~~very~~ ~~common~~ ~~noise~~ ~~pollution~~ ~~is~~ ~~very~~ ~~common~~

Many reasons including cars coming in with faulty exhausts causing them to be ~~loud~~ loud tools such as grinders, hammers and rattle guns being used in the workspace and Air tools being quite noisy these can be reduced by supplying ear plugs ~~and~~ and as little as possible doing noisy jobs in a different area of the workshop than the main part.

Air quality is a large problem if the workshop isn't well ventilated, if that is the case the workshop should have an extraction system installed into the workshop to have the fumes from exhaust, chemicals and other sources removed from the workshop
